

WeatherX coatings are renowned for their gloss retention, color robustness, and superior chalking resistance. WeatherX technology merges durable ceramic and other select inorganic pigments with the strength of Valspar's proprietary silicone polyester resin to fight the detrimental effects of the sun's ultraviolet rays, rain, humidity, and weathering. Furthermore, this paint system provides superior abrasion resistance to minimize cracking or marring from fabrication, transit, and construction. SR WeatherX color formulas meet or exceed the minimum requirements for an Energy Star® rating.
